Projects

DataChannel

Admin Panel where users can register themselves and configure various data connectors like GoogleAds, FacebookAds, AmazonAds, AppleAds, etc. and configure/schedule reports for each data connector

They can add their own data warehouse to retrieve data from these data connector like Redshift, MySQL, BigQuery, etc.

E-Power

Backend panel for agent management. Various functionality like agent creation, agent activation, access for health and travel product for agent, etc are handled through this.

Content Management System Health insurance

It is a backend panel for health insurance website to maintain various health and travel products.

Distributor Panel

It is a backend panel where travel agent can manage bookings, hotels, clientele, inventory, vouchers etc.

Aggregators can add booking details, hotel amenities and description, prices, write your own custom terms for each hotel/travel agent, insert owner details and pin address on the map. You can add custom categories, hotel types and hotel amenities and thus create a customized travel deals filter at the front-end.

It also enables Aggregators to manage their clientele and bookings (online and offline).

More than 4,000 hotels are available on the system.

Technologies used: Zend framework 1 for backend

Third Party APIs: Yahoo Weather API, SMS APIs(smsgupshup, netcore,etc.

Payment Gateway: Payumoney, PayTM

Corporate Panel

It is a backend panel for corporate users of aggregators, where corporate users can View/Manage their bookings and monthly reports.

Corporate Users can manage their profile and settings

Technologies Used: Zend framework 1, Zend framework 2(front end)

Reconium

Reconium is a web application for finding vulnerabilities in any website and creating a detailed graphical report describing found vulnerabilities and their severity.

Also provides automated scanning for vulnerabilities via python engine using scan scheduler.

Technologies Used: Zend framework 1, FusionCharts

Project Manager

It is a web application used for keeping track of employee's tasks and details within an organization. It also keeps track of all projects i.e. project's start date, end date, description, employees assigned to it, time spent, etc.

It is also used for storing daily status and work done by an employee.

Technologies Used: Zend framework 1, FusionCharts

I hereby declare that the information stated above is true to the best of my knowledge and belief. Given an opportunity I will prove to be worthy of my designation and dedicate myself to work wholeheartedly to take the organization to greater heights.
